# Press Release

Arlington, Texas – Local Engineering Firm Continues to Grow

Fratto Engineering Inc. announced a new marketing initiative structured to create awareness of FEI's (Fratto Engineering Inc.) MEP services.

Since its founding in 1997 as a multi-disciplined Mechanical Electrical Plumbing consulting engineering firm with three employees, FEI has grown to a regional operation with 16 employees. This success is attributed to FEI's engineering teams' performance. Fratto's achievement can be attributed to satisfied clients ranging from architects to healthcare organizations, developers and building owners.

FEI has earned particular recognition as specialists in the healthcare field due to the extensive number of projects completed for the medical community. A contributing factor is the strong emphasis FEI places on delivering a superior product -- on time, and within budget.

Fratto Engineering is using a combination of direct mail in conjunction with their web-site [www.frattoeng.com](http://www.frattoeng.com) to increase visibility and awareness for the firm. FEI will also participate in trade shows and industry events. The primary focus is on creating heightened awareness within the Architect Community while continuing to grow FEI through repeat business from their expanding roster of clients.

Additional information can be obtained by calling Fratto Engineering at 817-461-2337 or visiting their web-site [www.frattoeng.com](http://www.frattoeng.com).
